■ Python programming

# Profile

---

I love to learn, develop and comprehend something new. I always try to get things done. Like to travel. I dream of visiting and, if possible, living in different parts of the world. Participated in the knight's club "White Fox". After him left a hobby forge. Lately I've been diving into Python. In programming, I like that there is no development ceiling and a huge number of areas of application that are also constantly evolving and interacting with each other. In general, this is probably what I was always looking for. Now I want to put my skills into practice and participate in some projects, and in the future I want to create my own. I think that the greatest gift for a person is the mind, and the most significant achievement is knowledge.
